The device is in low-power mode state, it needs to be awakened then access.

Dormancy

The device is being awakened

Awaking

In this state, The mobile phone can make various accesses to the device;

Online

## 05.Message push

When a visitor presses a button or an alarm is generated, the device sends a message to the phone. You can receive the message in the following two ways:

### 1.Receive the message via the APP

Set up in the device use APP notification message.

Confirm the current account.

### 2.Receive the message via WeChat.

Log in APP with WeChat

Set up in the device use Wechat notification message.

Search in WeChat and flow the "ICSEE" official Account.

notes : If the Mobile phone is set up to power saving mode, such as screen off & network off , it will not receive the message in time, Since android phones do not agree on the default handling of message interceptions, it is recommended to use WeChat receive message except the iPhone and Huawei phones.

notes : The device would only send the message to the account which has the contact permission, please ensure that current account has been assigned to the contact person.

## 06.Bell Device Configuration

If you buy a Bell Device, you can associate the Bell Device with the Video Doorbell, and the bell device will also ring when you press the bell button.

First step: Long-press the volume button of the Bell Device until the indicator of the bell is no longer flashing.

Second step: Short-press the bell button of the Video Doorbell; if the bell is ringing at the same time, the configuration is successful.
